- ✓ Secure Searches
- ✓ Highlighted Snippets
- ✓ Relevant Results
- ✓ Auto-Suggestions
- ✓ Superior Performance
- ✓ Analytics Charting

DISCOVER... WHAT YOU'VE BEEN LOOKING FOR

Discover Enterprise™ is a feature-rich, high performance suite of search-based applications that enable knowledge workers to quickly find documents, web pages and other structured content using industry proven search platform technologies. The user interface for the applications can be easily configured to expose site-specific fields, facets, layout preferences and toolbar document operations. Additional features such as charting, personalization, feedback and security alert forms combine to offer a rich enterprise search experience within your organization.

Search Platforms

Discover Enterprise uses a data source adaptor technology within its framework to integrate with several of the major search platform vendors including Lucidworks Fusion™, Search Technologies Aspire™ and the Google Search Appliance™. In addition, we also support Lucene/Solr as part of an embedded search solution that can easily support small-to-mid-sized implementations.

Single Sign-On

Organizations using Windows Integrated Authentication (a.k.a. Kerberos) can utilize our single sign-on feature for user authentication within your Active Directory network.

Configurable Search Experience

Discover Enterprise grants the site administrator the ability to identify which documents and properties they wish to include in their search experience. In addition, the user interface can be tailored to use site-specific search fields, filter options and result presentations. Both tasks can be easily accomplished with a basic text editor —no programming required!

Discover More Content

NorthRidge Software extends the value of its Discover search applications by providing consulting and development services that expand the scope of searchable information to include additional corporate content sources such as shared file systems, intranet sites, legacy databases and content management systems.

Search Based Applications

Our standard out-of-the-box search interfaces are designed to meet the general needs of an organization's user community. However, there are occasions when those users could benefit from a specialized search application tuned to their specific needs. NorthRidge Software has a rich history of building custom search-based applications that meet specific user requirements and result in significant productivity improvements.
